## TERMS

Our terms, unless by special agreement, are net cash. Claims for errors or shortage must be made within five days of receipt of stock otherwise they cannot be entertained.

---

## SHIPMENTS

Shipments are made at purchaser's risk. Our responsibility ceases when goods are delivered in good order to the carrier. Claims for damages must be made to the transportation company.

---

## GUARANTEE

We make no guarantee of the life of the nursery stock as we have no control of it after it leaves our hands. Any stock untrue to name will be replaced but in no case will we be responsible for an amount greater than the purchase price of the plants.

---

## PACKING

Packing is additional to the prices of the plants and is charged at actual cost.

---

## ORDERS

All orders are subject to stock being unsold upon receipt of order.

---

## Planting Directions for Ericaceous Plants

Humus means success assured with Rhododendron, Mountain Laurel, Andromeda, Azaleas, Blueberries, and other plants of the beautiful Heath family, and wild flowers and ferns.

There are no flowering plants more exquisitely beautiful than well grown members of the Heath family (ericaceae) but unfortunately many of these beautiful shrubs have been planted without regard to their soil requirements; consequently the results have been disappointing and unsatisfactory.

Practically all the ericaceae require an acid soil which may be readily obtained by the use of Humus, directions for the use of which are as follows:

Where soil is neutral or acid, cover the planting area with three inches of Humus and thoroughly spade and rake in. 500 pounds is sufficient for 50 square feet of ground.

Where the soil is known to contain lime, excavate to the depth of two feet, put in six inches of coarse gravel, and fill to the ground level with Humus. This will require 35 lbs. of Humus for each shrub if set three feet apart. In addition, if the planting area is located so that the water impregnated with lime might flow into it, protect the area with a dam of Humus six inches high, laid in a way that surface water would be diverted.

After planting, mulch all shrubs not less than four inches deep with Humus. Experiments made by the Department of Agriculture have demonstrated the value of acid Humus in growing members of the Heath family successfully.

\$5.00 for five 100 lb. bags, \$18.00 per ton, f.o.b. Carload price on application.

## HUMUS

A product of decomposing organic matter. It is one of the most important soil constituents from the agricultural point of view. **It is the Chief Source of Nitrogenous Food for Plants** and modifies the properties of the soil by increasing its water-holding capacity and diminishing its tenacity.

—Encyclopedia Britannica.

Humus makes a sandy soil hold water—it makes a clay soil friable and prevents its baking. It improves soil ventilation and hastens germination. It contains all the elements necessary for plant growth. Its use means better plants, shrubs, trees and vegetables. As a top dressing for a lawn it is unexcelled. At the price sold it has no equal as a **FERTILITY MAKER**. Five 100-lb. bags, \$5.00. \$18.00 per ton f.o.b. Special Price in Carloads in Bulk.
